

# Blood Products - Cool Cube™ PCM Transport Coolers

A Cool Cube™ at Fridge Temperatures is not an ordinary transport cooler. It is a portable, validated container and pack-out system that keeps temperature sensitive product (whole blood, RBCs, liquid plasma, etc.) chilled between 1 and 10 °C for over 2½ days (or between 1 and 6 °C for over 1½ days) – *without using ice or electricity!* This simple system streamlines the transport of valuable, refrigerated product and protects it from warming or freezing during off-site use or power outages. The validated, patented technology of a Cool Cube™ saves time, saves money and is improving cold chain management practices around the world. The Cool Cube™ is a container and pack-out system so advanced...it's easy!
